

PRO-TRONIC

Electronic Suspension Module

Removing the standard electronic adjustable dampers in exchange for high-performance adjustable suspension systems is usually a simple process. However, during the installation, error message from the on-board computer may be experienced.

- With Pro-Tronic, the standard damper regulation is de-activated and prevents an error message
- The functions of the controller and/or regulating systems are preserved and remain operational
- Pro-Tronic can also be used with suspension systems from other manufacturers, incl. OE Sport Suspension Systems
